

Emerging Tech Accelerator Files Patents For ETtools™ and ETsource™

Portland, Ore. January 28, 2009—[Emerging Tech Accelerator](#), a business development service that expedites the time for corporate innovation teams to discover, collaborate, and select game changing technologies that will improve their competitiveness, today filed patents for its proprietary ETsource™ and ETtools™—a robust set of collaboration, study and decision tools for use in selecting high-value technology innovations—with the United States Patent Office and the World Intellectual Property Organization.

ETtools is based on principles observed after conducting live introductions of thousands of emerging tech sellers to hundreds of Global 2000 companies over a number of years. ETtools virtualizes and compresses the process for buyer's discovery and vetting of seller, initial introduction, and gathering consensus within the buyer's organization to investigate the seller's solution in depth. The Emerging Tech Accelerator process can compress what normally is a 12- to 18-month cycle into as little as six weeks, while concurrently performing up to ten in-depth problem/solution evaluations.

ETsource contains intellectual property, clinical trials or market-ready companies—many of which are already venture funded.

About Emerging Tech Accelerator

Based in Portland, Oregon and launched in 2007, Emerging Tech Accelerator expedites the time for corporate innovation teams to discover, collaborate, and select game changing technologies that will improve their competitiveness. Sellers/entrepreneurs of innovative technology have highly effective path to qualified corporate buyers of innovation. Investors can see their ROI improve by having their portfolio companies involved with ETsource and ETforum.
